PROFILE

Enthusiastic undergraduate at SLIIT pursuing a BSc (Hons) in Information Technology, with a strong interest in Software Engineering and Artificial Intelligence. Experienced in building full-stack applications using Java, Spring Boot, and MERN stack technologies. Passionate about problem solving, clean code, and developing scalable, user-focused systems. Continuously learning and applying modern technologies through real-world projects.

EDUCATION

BSc (Hons) in Information Technology 2024 - 2028 (Expected)
Sri Lanka Institute of Information Technology (SLIIT) | Specialization: Artificial Intelligence

TECHNICAL SKILLS

Languages: JavaScript, Java, Python, HTML/CSS
Frameworks: MERN, Spring Boot, React, Flask
Databases & Tools: MongoDB, PostgreSQL, Git, GitHub
AI / ML: Scikit-learn, Pandas, NumPy, Matplotlib, TensorFlow, OpenAI API, Jupyter Notebook

PROJECTS

Dr.Computer – Web-Based IT Service Platform ([Backend](#),[Frontend](#))

Stack: MongoDB, Express.js, React, Node.js | Type: Individual Full-Stack Project

- Developing a MERN-based web application focused on providing IT-related services and user interaction features.
- Implemented JWT token for authorization
- Implemented core functionalities including user interface design, routing, and basic CRUD operations using React and Node.js.
- Designed RESTful APIs and integrated MongoDB for managing application data and user requests.
- Demonstrates full-stack development skills, including front-end design, back-end logic, and database integration in a scalable web architecture.

QuickBite - Food Ordering Mobile App

Stack: MongoDB, Express, React, Node.js (MERN) | Type: Group Full-Stack Project (Year 2, Semester 2)

- Contributed to a full-stack food ordering app with React Native frontend components and MongoDB

schema design.

Flask Blog Web Application ([Github](#))

Stack: Python, Flask, HTML/CSS, Jinja2, PostgreSQL | Type: Individual Full-Stack Project

- Built a full CRUD blog platform with user authentication, templated rendering, and database persistence.
- Implemented user authentication and session management to secure user interactions.

VehicleIQ - Intelligent Vehicle Price Prediction ([Github](#))

Stack: Python, Scikit-learn, Pandas, Flask | Type: Individual ML Project

- Engineered 15+ features from raw vehicle and economic data; trained and compared multiple regression models including Linear, Ridge, and Random Forest.
- Achieved best model accuracy using Random Forest with hyperparameter tuning; deployed via a Flask REST API.
- Demonstrates end-to-end ML pipeline: data cleaning, feature engineering, model selection, and deployment.

OpenAI Chatbot Integration ([Github](#))

Stack: Python, OpenAI API | Type: Individual AI/API Project

- Integrated the OpenAI API to build a conversational chatbot; explored prompt engineering and context management.
- Demonstrates hands-on experience with LLM APIs and understanding of generative AI workflows.

AREAS OF INTEREST

- Software Engineering
- Artificial Intelligence and Machine Learning
- Full-Stack Web Development
- Data Science and Analytics
